

Welcome to the World of Billington Biofuels...

Happy New Year from us all at Billington Biofuels! Welcome to the first edition of our BBF newsletter, updating you on the Billington world of wood pellets...

With the non-domestic Renewable Heat Incentive now firmly in place, we are busier than ever delivering fuel, advising customers on wood pellets, financial savings and much more.

A flying start to January...

Following the successful installation of a wood fuelled heating system in Stansted in 2008, a new wood pellet boiler situated in the Fire Station Building of Heathrow Airport is set to be commissioned this month. The boiler is expected to use in excess of 600 tonnes per year and will be supplied with wood pellet fuel through a partnership established between LC Energy, BAA's current biomass supplier and Billington Biofuels, a leading wood pellet distributor. The commissioning of this boiler follows on from a similar installation in the recently redeveloped Terminal 2 building which is supplied with wood chip by LC Energy. Both wood fuelled heating systems have been installed as part of a wider commitment by BAA to reducing its carbon footprint. BAA's ambitious targets seek to reduce CO2 by 34% by 2020, in line with government figures.

Billington Biofuels to exhibit at Ecobuild 2012

Ecobuild is the world's largest sustainable design, construction and built environment event in the UK. This year Billington Biofuels will be exhibiting alongside 1500 other cutting edge firms to bring you the latest in wood pellet expertise. During the event we will be on hand to offer advice and guidance for all things pellet related and give support to installers of biomass systems.

Tuesday 20 – Thursday 22 March 2012
ExCeL, London www.ecobuild.co.uk

Quality Matters...

Over the last quarter Billington Biofuels has implemented a strict quality control regime on all their bulk fuel. This is to ensure ENplus conformity throughout the delivery process- retaining the highest standards of our delivered fuel. New policies and control systems have been established internally, in conjunction with our suppliers and haulage operations, which together encompass every aspect of our business. We will be tracking the results of our quality controls to improve service to our customers and confidence in the industry as a whole. Data graphs (like the ones below), will demonstrate our commitment to fuel quality to you and our customers.

Fuel Consistency Graphs:

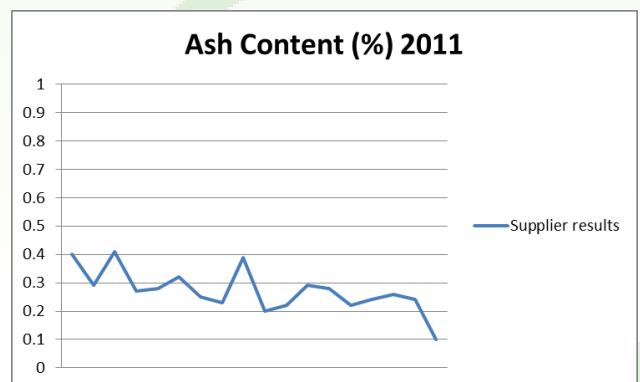

Our fuel consistency graphs have provided us with much information about our suppliers. By monitoring this we are able to highlight any issues that might arise.

Working for YOU

Billington Biofuels are dedicated to the biomass industry and its long term development. We want the industry to expand with a credible reputation, high levels of customer satisfaction and high quality biomass heating systems. That's why our New Year's resolution is 'Working for YOU'.

We want to do more for installers, for manufacturers, for design consultants, for industry officials and for local authorities- to help promote high confidence in biomass and ensure the best possible experience for every client you engage with.

We can assess for you: vehicle access to sites, optimum delivery routes of fuel, silo location, financial costs + benefits of long term fuel supply with us and of course, offer exceptional customer service.
